Pioneer

ORDER NO.
RRV2352

COMPACT DISC RECORDER / MULTI-CD CHANGER

PDR-W839

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Type	Model	Power Requirement	Remarks
	PDR-W839		
KUXJ/CA	○	AC120V	
WYXJ	○	AC220-240V	
WVXJ	○	AC220-240V	

[EXPLANATORY NOTE]

- After repairing the unit, make sure to return the operation condition to the shipping position. (for protection during packing)
Refer to P.81 "Setting the initial condition for shipping".

— FOR U.S. MODELS —

NECESSARY INFORMATION FOR DHHS RULES MARKED ON THE REAR BASE AND ON THE TOP OF CD MECHANISM AS BELOW.

DANGER – LASER RADIATION WHEN OPEN.
AVOID DIRECT EXPOSURE TO BEAM.

1. SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

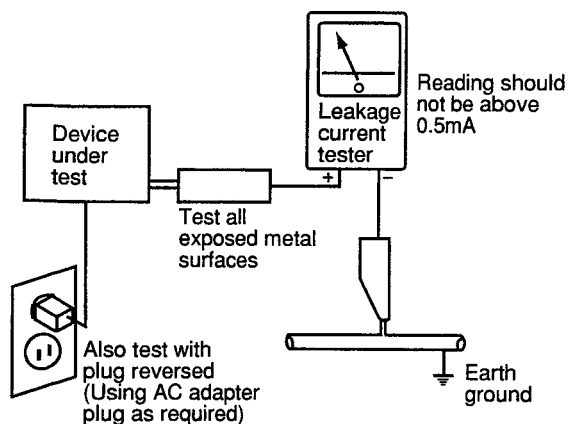

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

CD RECORDER**IMPORTANT**

THIS PIONEER APPARATUS CONTAINS LASER OF CLASS IIIb. SERVICING OPERATION OF THE APPARATUS SHOULD BE DONE BY A SPECIALLY INSTRUCTED PERSON.

LASER DIODE CHARACTERISTICS

MAXIMUM OUTPUT POWER: 23 mW
WAVELENGTH: 778 - 787 nm

CD PLAYER**IMPORTANT**

THIS PIONEER APPARATUS CONTAINS LASER OF CLASS 1. SERVICING OPERATION OF THE APPARATUS SHOULD BE DONE BY A SPECIALLY INSTRUCTED PERSON.

LASER DIODE CHARACTERISTICS

MAXIMUM OUTPUT POWER: 5 mW
WAVELENGTH: 760 - 800 nm

LABEL CHECK**WYXJ Type****WVXJ Type****WYXJ Type****WYXJ and WVXJ Types**

Printed on Rear Panel

KUXJ/CA Type

Printed on Rear Panel

**CD RECORDER****Additional Laser Caution****1. Laser Interlock Mechanism**

The position of the switch (S101) on the LOAB Assy for detecting loading state is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch (S101) is not on TRAY terminal side (TRAY signal is OFF or high level.). Thus, the interlock will no longer function if the switch (S101) is deliberately set to TRAY terminal side (low level).

The interlock also does not function in the test mode *.

Laser diode oscillation will continue, if pin 1 of CN101 on the CD-R CORE ASSY is connected to low level.

- 2. When the cover is opened with the servo mechanism block removed and turned over, close viewing of the objective lens with the naked eye will cause exposure to a Class 3 laser beam.**

* Refer to page 64.

CD PLAYER**Additional Laser Caution****1. Laser Interlock Mechanism**

The position of the switch (S101) on the SELECT UNIT for detecting clamping state is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch (S101) is not on CLMP terminal side (CLMP signal is OFF or high level.). Thus, the interlock will no longer function if the switch (S101) is deliberately set to CLMP terminal side (low level).

The interlock also does not function in the test mode *.

Laser diode oscillation will continue, if pin 9 of TA2150FN (IC1101) on the 3CD ASSY is connected to GND, or pin 26 is connected to low level (ON), or else the terminals of Q1101 are shorted to each other (fault condition).

- 2. When the cover is opened with the servo mechanism block removed and turned over, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.**

* Refer to page 63.

2. EXPLODED VIEWS AND PARTS LIST

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Screws adjacent to ∇ mark on the product are used for disassembly.

5. PCB PARTS LIST

NOTES: ●Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

●The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

●When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω \rightarrow 56×10^1 \rightarrow 561 RD1/4PU 561 J

47k Ω \rightarrow 47×10^3 \rightarrow 473 RD1/4PU 473 J

0.5 Ω \rightarrow R50 RN2H R50 K

1 Ω \rightarrow 1R0 RS1P 1R0 K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω \rightarrow 562×10^1 \rightarrow 5621 RN1/4PC 5621 F

6. ADJUSTMENT

• 3CD CHECK

NOTE: There is no information to be shown in this 3CD adjustment.

6.1 3CD SLIDER OPERATION CONFIRMATION

- (1) Eject the disc, and when all 3CD tray stay at the home position, turn off the power. (Refer to the right picture)
- (2) Move the slider gear so that the slider move to the outer side. (Refer to the right picture.)
- (3) Turn on the power and confirm the following ①~⑤ movement.
 - ① The pick-up move to the most inner side.
 - ② The tray do the clamping movement.
 - ③ The pick-up do the spindle-kick movement, and then do the LD ON and FOCUS ON movement. (3 times)
 - ④ Redo the ③ movement once more.
 - ⑤ Confirm the FL display that the set detect NO DISC.

DANGER – LASER RADIATION WHEN OPEN.
AVOID DIRECT EXPOSURE TO BEAM.

3CD Tray at Home position

■ Check Point

6.2 3CD RF OUTPUT AND JITTER LEVEL CONFIRMATION

- (1) Set the RW disc to the CD-R side.
- (2) Copy from 3CD side to CD-R side at normal and double speed.
- (3) Confirm the RF output and jitter level of 3CD side at normal and double speed.

[Standard Value]

(Use STD-903 or STD-905 Test Disc)

	Normal Speed	Double Speed
JITTER	under 25 ns	under 20 ns
RF LEVEL	about 1.2 V _{p-p}	about 1.0 V _{p-p}

V: 50mV/div., H: 500msec/div.
(play)

RF Output Waveform
at IC1101 PIN25

IC1101 PIN25

● CD-R ADJUSTMENT

6.3 DISCS TO BE USED

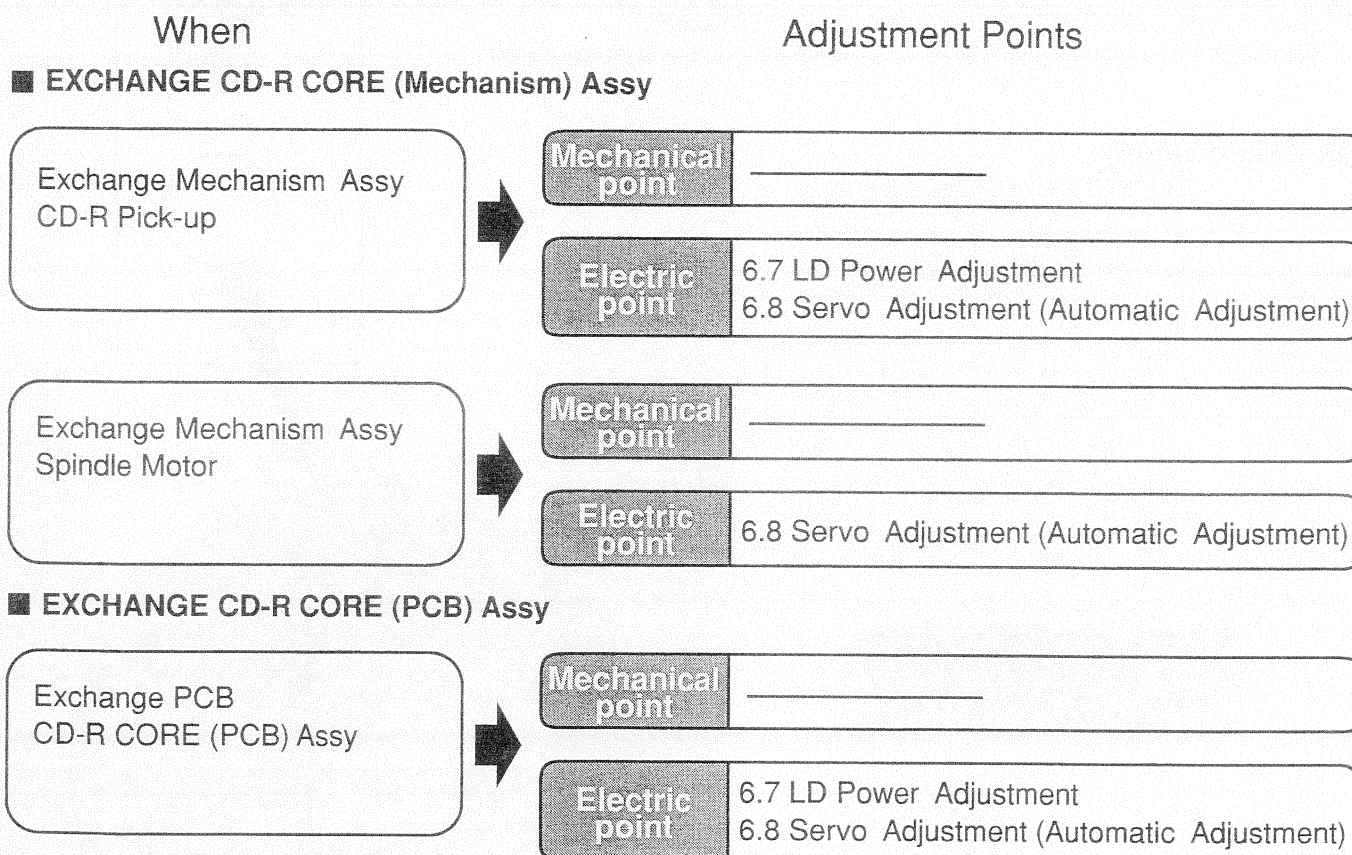

• SERVO SYSTEM ADJUSTMENT

CD: Test disc for adjustment (STD-903) or equivalent
 Test disc for inspection (STD-914) or equivalent

6.4 MEASURING INSTRUMENTS

- (1) Laser power meter
 Following power meter manufactured by Advantest Corporation or equivalent:
 TQ8210 + TQ82017
 TQ8215 + TQ82021
 TQ8215 + TQ82010 + TQ82017
 LE8010 (by LEADER)
- (2) Oscilloscope
- (3) CD Jitter Meter

6.5 NECESSARY ADJUSTMENT POINTS

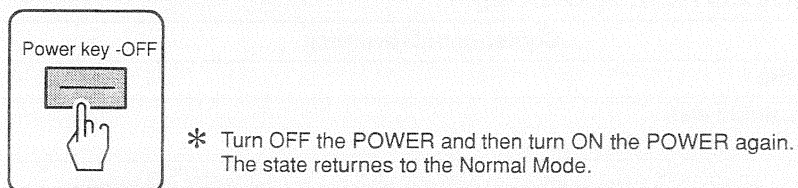

6.6 TEST MODE

6.6.1 How to Enter the Test Mode

TEST MODE : ON

TEST MODE : STOP → CANCEL

6.6.2 Test Point

6.6.3 OPERATIONS IN TEST MODE

■ LD Power Adjustment (INPUT SELECTOR: ANALOG)

Key No.	Assignment Key	Contents of Movement
①	▲ (OPEN/CLOSE)	Tray Open/Close
②	■ (STOP)	LD power adjustment end Turn off the LD and disc selection set to CD.
③	▶/ (PLAY/PAUSE)	Store the power adjustment value to the EEPROM and shift to the next power adjustment.
④	● (REC/REC MUTE)	LD POWER adjustment standby Switch the setting of ◀◀▶▶ key during adjustment. (coarse adjustment ↔ fine adjustment : default is the coarse adjustment)
⑤	NAME	Starts the LD POWER adjustment (from 0) (CD: Playback power, CD-R/RW: Record power)
⑥	▶▶▶▶ (F SCAN)	Move the pickup to outer periphery of the disc
⑦	◀◀◀◀ (R SCAN)	Move the pickup to inner periphery of the disc
⑧	REC VOL(JOG ±)	Adjustment value setting
⑨	ENTER	Adjustment data register
⑩	Not used	Not used
⑪	ERASE	Disc specification switch
⑫	DISPLAY	Adjustment from the adjustment result stored in the EEPROM at adjustment standby. During adjustment, shift to the next power adjustment not to store the current power adjustment value in the EEPROM.

■ Servo Adjustment (INPUT SELECTOR: OPTICAL)

Key No.	Assignment Key	Contents of Movement
①	▲ (OPEN/CLOSE)	Tray Open/Close
②	■ (STOP)	Servo OFF
③	▶/ (PLAY/PAUSE)	Spindle servo ON, Tracking servo ON/OFF
④	● (REC/REC MUTE)	Starts the automatic adjustment of servo adjustment ("FEOS" is displayed.)
⑥	▶▶▶▶ (F SCAN)	Move the pickup to outer periphery of the disc
⑦	◀◀◀◀ (R SCAN)	Move the pickup to inner periphery of the disc
⑧	REC VOL(JOG ±)	Adjustment value setting
⑨	ENTER	Adjustment data register
⑩	FINALIZE	Focus servo ON
⑪	ERASE	Disc specification switch Continue pressing it more than three seconds and initialize the adjustment data.
⑬	SYNCHRO	Execute the average adjustment
⑭	AUTO SPACE	Servo adjustment mode feed

6.7 LD POWER ADJUSTMENT

**DANGER – LASER RADIATION WHEN OPEN.
AVOID DIRECT EXPOSURE TO BEAM.**

6.7.1 Playback Power Adjustment

Test Point	Pickup objective lens
Adjustment Value	0.9 mW \pm 0.05 mW
Purpose	Optimizing playback power of laser diode.
Symptom when Out of Adjustment	Incapable of disc discrimination, playback, or track searches. Or track skipping.
Adjustment method	
[Procedure] 1. Enter the Test mode. 2. Press the INPUT key so that "ANALOG" appears on the FL display. 3. Press the ERASE key so that "CD" appears on the FL display. 4. Move the pickup to the position where the power is easy to measure by pressing the SCAN key. (◀◀◀◀ ▶▶▶▶) 5. Press the REC/REC MUTE and NAME key in order, and light the LD. 6. Turn the JOG key to adjust the power. Switch the coarse adjustment and the fine adjustment by pressing the REC/REC MUTE key, and adjust it. (initial state is the coarse adjustment.) 7. Press the ENTER key to register the adjustment if the power became the adjustment value. 8. Press the STOP key to goes out the LD, and adjustment is completed.	
FL Indication	
『00000000__x1』	
『PLAY__*00__』	
『00000000__x1』	

**DANGER – LASER RADIATION WHEN OPEN.
AVOID DIRECT EXPOSURE TO BEAM.**

6.7.2 CD-R Record Power Adjustment

Test Point	Pickup objective lens
Adjustment Value	R REC : 4.3 mW \pm 0.1 mW (=A value) ; R Over Drive : A value + 0.1mW \pm 0.01 mW
Purpose	Optimizing CD-R recording power of laser diode.
Symptom when Out of Adjustment	Incapable of CD-R recording, playing CD-Rs recorded on it. Sound pauses, track skipping, or bad RF wave form (though no failure in playing CD).
Adjustment method	
[Procedure] 1. Enter the Test mode. 2. Press the INPUT key so that "ANALOG" appears on the FL display. 3. Press the ERASE key so that "CD-R" appears on the FL display. 4. Move the pickup to the position where the power is easy to measure by pressing the SCAN key. (◀◀◀◀ ▶▶▶▶) 5. Press the REC/REC MUTE and NAME key in order, and light the LD. <Adjustment of CD-R Record Power> 6. Turn the JOG key to adjust the power. Switch the coarse adjustment and the fine adjustment by pressing the REC/REC MUTE key, and adjust it. (initial state is the coarse adjustment.) 7. Press the PLAY/PAUSE key to register the adjustment if the power became the adjustment value. (assume the power when it was decided by A value) When it is registered, shift to the Overdrive power adjustment automatically. <Adjustment of CD-R Overdrive Power> 8. Turn the JOG key to adjust the power. Switch the coarse adjustment and the fine adjustment by pressing the REC/REC MUTE key, and adjust it. (initial state is the coarse adjustment.) 9. Press the ENTER key to register the adjustment if the power became the adjustment value. 10. Press the STOP key to goes out the LD, and adjustment is completed.	
FL Indication	
『00000000__x1』	
『R_REC__*0000』	
『R_OD__*0000』	
『00000000__x1』	

**DANGER – LASER RADIATION WHEN OPEN.
AVOID DIRECT EXPOSURE TO BEAM.**

6.7.3 CD-RW Record Power Adjustment

Test Point	Pickup objective lens
Adjustment Value	RW Bias : 2.3 mW \pm 0.05 mW, RW Rec : 3.2 mW \pm 0.05 mW, RW Erase : 5.2 mW \pm 0.1 mW
Purpose	Optimizing CD-RW recording power of laser diode.
Symptom when Out of Adjustment	Incapable of CD-RW recording, playing CD-RWs recorded on it. Sound pauses, track skipping, or bad RF wave form (though no failure in playing CD).
Adjustment method	
<p>[Procedure]</p> <ol style="list-style-type: none"> 1. Enter the Test mode. 2. Press the INPUT key so that "ANALOG" appears on the FL display. 3. Press the ERASE key so that "CD-RW" appears on the FL display. 4. Move the pickup to the position where the power is easy to measure by pressing the SCAN key. (◀◀◀◀ ▶▶▶▶) 5. Press the REC/REC MUTE and NAME key in order, and light the LD. <p><Adjustment of CD-RW Bias Power></p> <ol style="list-style-type: none"> 6. Turn the JOG key to adjust the power. Switch the coarse adjustment and the fine adjustment by pressing the REC/REC MUTE key, and adjust it. (initial state is the coarse adjustment.) 7. Press the PLAY/PAUSE key to register the adjustment if the power became the adjustment value. When it is registered, shift to the CD-RW Record Power Adjustment automatically. <p>Note: In the CD-RW Bias Power Adjustment, in the case that the power is over 2.3 mW when the LD lighted, do not need to perform the Bias Power Adjustment. Set adjustment value of the CD-RW record power to + 0.9mW \pm 0.05mW against the power in LD lighting then.</p> <p><Adjustment of CD-RW Record Power></p> <ol style="list-style-type: none"> 8. Turn the JOG key to adjust the power. Switch the coarse adjustment and the fine adjustment by pressing the REC/REC MUTE key, and adjust it. (initial state is the coarse adjustment.) 9. Press the PLAY/PAUSE key to register the adjustment if the power became the adjustment value. When it is registered, shift to the CD-RW Erase Power Adjustment automatically. <p><Adjustment of CD-RW Erase Power></p> <ol style="list-style-type: none"> 10. Turn the JOG key to adjust the power. Switch the coarse adjustment and the fine adjustment by pressing the REC/REC MUTE key, and adjust it. (initial state is the coarse adjustment.) 11. Press the ENTER key to register the adjustment if the power became the adjustment value. 12. Press the STOP key to goes out the LD, and adjustment is completed. 	
<p>FL Indication</p> <p>『00000000__x1』</p> <p>『RwBIAS_*0000』</p> <p>『RwREC_*0000』</p> <p>『RwERAS_****』</p> <p>『00000000__x1』</p>	

Cautions:

- (1) All the reading values of power meter of this adjustment are values with an average.
- (2) How to confirm the adjustment value:
When enter the power adjustment mode, enter it by pressing the REC/REC MUTE and DISPLAY keys in order. Furthermore, can confirm the adjustment value of each power stored in EEPROM by switching the DISPLAY key. However, RW cannot see all adjustment results. Use DAC the same as erase power in the Bias Power Adjustment, and perform the adjustment of record power while outputting the setting value of erase power decided in the Bias Power Adjustment. And perform the Erase Power Adjustment while outputting the setting value of the record power. Therefore, the value of Bias Power Adjustment does not remain after adjustment of the erase power. (as for the displayed adjustment value, erase power is the same as bias power.)
It is only erase power that can confirm the adjustment result with the power meter among power of RW.
As for the value of Record Power Adjustment, only setting numeric value is readable, but output power becomes the same as the erase power.
Bias power cannot confirm the setting value, too. Be not used during actual record operations either.

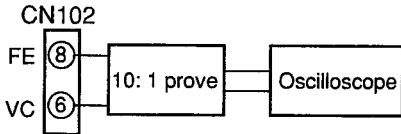

6.8 SERVO ADJUSTMENT

■ MANUAL ADJUSTMENT

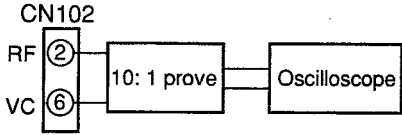

6.8.1 Preparations

1. Enter the TEST mode.
2. Press the INPUT key so that "OPTICAL" appears on the FL display.
3. Press the ERASE key more than three seconds to initialize it.
4. Press the SYNCHRO key to perform the average process.
→"OPTICAL" disappears on the FL display when completed.

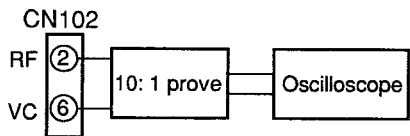

6.8.2 Focus Offset Adjustment

Test Point	CN102-pin 8 (Focus err)
Adjustment Value	0 mV \pm 30 mV
Purpose	Optimizing DC offset voltage of focus-error amplifier.
Symptom when Out of Adjustment	Focus-in does not function, or bad RF wave shape.
Adjustment method	
[Procedure] 1. Monitor the FOCUS ERROR waveform with VC. 2. Adjust the JOG key so that FE offset becomes zero. 3. Press the ENTER key to register the adjustment.	
	
FL Indication 『FEOS__00__』 『FEOS__**_?』 『FEOS__**__』	

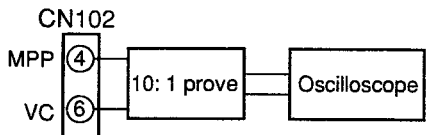

6.8.3 SRFO Offset Adjustment

Test Point	CN102-pin 2 (RF)
Adjustment Value	0 mV \pm 30 mV
Purpose	Optimizing DC offset voltage of RFDC output circuit when recording.
Symptom when Out of Adjustment	Recording does not function.
Adjustment method	
[Procedure] 1. Press the AUTO SPACE key and shift to the SRFO Offset Adjustment. 2. Monitor the RFDC waveform with VC. 2. Adjust the JOG key so that RFDC offset becomes zero. 3. Press the ENTER key to register the adjustment.	
	
FL Indication 『SRFOS__00__』 『SRFOS__**_?』 『SRFOS__**__』	

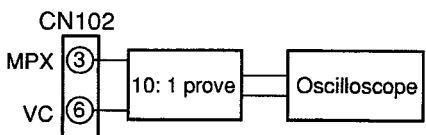

6.8.4 RFOM Offset Adjustment

Test Point	CN102-pin 2 (RF)
Adjustment Value	0 mV \pm 30 mV
Purpose	Optimizing DC offset voltage of RFDC output circuit when playing back.
Symptom when Out of Adjustment	Focus-in does not function, incapable of searching, or track skipping.
Adjustment method	
[Procedure] 1. Press the AUTO SPACE key and shift to the RFOM Offset Adjustment. 2. Monitor the RFDC waveform with VC. 2. Adjust the JOG key so that RFDC offset becomes zero. 3. Press the ENTER key to register the adjustment.	
	
FL Indication	
『RFOMO_00__』 『RFOMO_**_?』 『RFOMO_**__』	

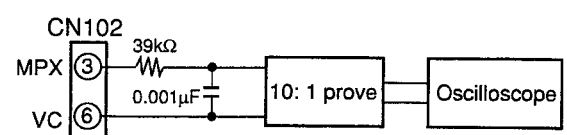

6.8.5 MPP Offset Adjustment

Test Point	CN102-pin 4 (MPP)
Adjustment Value	0 mV \pm 50 mV
Purpose	Optimizing DC offset voltage of main signal output circuit.
Symptom when Out of Adjustment	Playback does not function, incapable of searching, or track skipping.
Adjustment method	
[Procedure] 1. Press the AUTO SPACE key and shift to the MPP Offset Adjustment. 2. Monitor the MPP waveform with VC. 2. Adjust the JOG key so that MPP offset becomes zero. 3. Press the ENTER key to register the adjustment.	
	
FL Indication	
『MPPOS_00__』 『MPPOS_**_?』 『MPPOS_**__』	

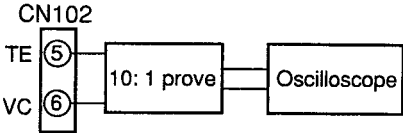

6.8.6 SPP Offset Adjustment

Test Point	CN102-pin 3 (MPX)
Adjustment Value	0 mV \pm 50 mV
Purpose	Optimizing DC offset voltage of sub-signal output circuit.
Symptom when Out of Adjustment	Playback does not function, incapable of searching, or track skipping.
Adjustment method	
[Procedure] 1. Press the AUTO SPACE key and shift to the SPP Offset Adjustment. 2. Monitor the MPX waveform with VC. 2. Adjust the JOG key so that SPP offset becomes zero. 3. Press the ENTER key to register the adjustment.	
	
『S P P O S _ 0 0 _ _』 『S P P O S _ * * _ ?』 『S P P O S _ * * _ _』	

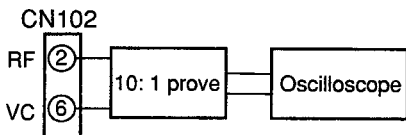

6.8.7 Tracking Gain adjustment

Test Point	CN102-pin 3 (MPX)
Adjustment Value	Minimize (MPP+SPP)
Purpose	Matching gains of pickup main signal output and sub-signal output.
Symptom when Out of Adjustment	Playback does not function, or incapable of searching.
Adjustment method	
[Procedure] 1. Press the AUTO SPACE key and shift to the Tracking Gain (MS MIX) Adjustment. 2. Move the Pickup to center of the disc by pressing the SCAN key. (◀◀◀◀ ▶▶▶▶) 3. Monitor the MPX signal and set a CD disc. 4. Press the FINALIZE key to FOCUS IN. 5. Press the PLAY/PAUSE key to turn the SPINDLE. (CAV) 6. Adjust the JOG key so that MPX waveform (MPP+SPP) becomes minimum. 7. Press the ENTER key to register the adjustment. 8. Press the STOP key to stop the disc rotation.	
	
『S P P G _ _ 7 0 _ _』 『S P P G _ _ * * _ ?』 『S P P G _ _ * * _ _』	

6.8.8 MPP Offset Readjustment

Test Point	CN102-pin 5 (Tracking err)	
Adjustment Value	0 mV ± 50 mV	
Purpose	Optimizing DC offset voltage of tracking-error output circuit.	
Symptom when Out of Adjustment	Playback does not function, incapable of searching, or track skipping.	
Adjustment method		FL Indication
<div><p>[Procedure]</p><ol style="list-style-type: none">Press the AUTO SPACE key and shift to the MPP Offset Readjustment. (Press the AUTO SPACE key several times to appear the right indication.)Monitor the TE waveform with VC. Be careful with monitoring TE waveform instead of MPP waveform in the readjustment !Adjust the JOG key so that TE offset becomes zero.Press the ENTER key to register the adjustment.</div> <div><p>CN102</p><p>TE ⑤</p><p>VC ⑥</p><p>10: 1 probe</p><p>Oscilloscope</p></div>		<div>『M P P O S _ * * _ 』</div> <div>『M P P O S _ * * _ ? 』</div> <div>『M P P O S _ * * _ 』</div>

6.8.9 Focus Bias Adjustment

Test Point	CN102-pin 2 (RF)
Adjustment Value	Minimize jitter value
Purpose	Optimizing DC offset voltage of focus servo loop circuit including pickup.
Symptom when Out of Adjustment	Focus-in does not function, sound pauses, bad RF wave form, or incapable of playing some discs.
Adjustment method	
<p>[Procedure]</p> <ol style="list-style-type: none"> 1. Press the AUTO SPACE key and shift to the Focus Bias Adjustment. 2. Press the SYNCHRO key to perform the average process. → "OPTICAL" disappears on the FL display when completed. 3. Move the Pickup to center of the disc by pressing the SCAN key. (◀◀◀◀ ▶▶▶▶) 4. Monitor the jitter value and set a CD disc. (use the jitter meter) 5. Press the FINALIZE key to FOCUS IN. 6. Press the PLAY/PAUSE key to turn the SPINDLE. (CAV) 7. Press the PLAY/PAUSE key to TRACKING ON. (EFM CLV) 8. Adjust the JOG key so that jitter value becomes minimum. 9. Press the ENTER key to register the adjustment. → Shift to the RFDC Level Adjustment automatically. 10. Adjustment is completed automatically. → Each display the reason that became abnormal when adjustment was not completed normally. When did not converge in limit of adjustment possibility (when it became the lowest level) When failed in writing to the EEPROM 11. Press the STOP key to stop the unit. <p>Caution: In this adjustment, shift to the RFDC Adjustment when pressing the ENTER key before step 9, and there is it when completed in normal on the indication. However, must not omit operation of steps 7 from 5 because RFDC is not adjusted to normal when pressing the ENTER key with the state that steps 7 from 5 are not executed.</p>

Adjustment is completed automatically. → Each display the reason that became abnormal when adjustment was not completed normally. When did not converge in limit of adjustment possibility (when it became the lowest level) When failed in writing to the EEPROM 9. Press the STOP key to stop the operation. <p>Caution:</p> <p>In this adjustment, shift to the RFDC Adjustment when pressing the ENTER key before step 7, and there is it when completed in normal on the indication.</p> <p>However, must not omit operation of steps 5 from 3 because RFDC is not adjusted to normal when pressing the ENTER key with the state that steps 5 from 3 are not executed.</p> <div style="text-align: center;"> <pre> graph LR subgraph CN102 RF[②] VC[⑥] end RF --- P[10:1 probe] VC --- P P --- O[Oscilloscope] </pre> </div>	
<p>『FBIAS_**_?』 『FBIAS_**_』 『RFDC_**_』 『RFDC__ADJ_OK』 『RFDC__ADJ_NG』 『RFDC__EEP_NG』 『FBIAS_**_』</p>	

How to execute the automatic adjustment once again after the automatic adjustment is completed:

1. Press the STOP key to stop the disc rotation. (servo OFF)
2. Press the AUTO SPACE key and shift to the Focus Offset adjustment.
3. Press the REC/REC MUTE key to start the automatic adjustment.

Adjust from "6.8.11 automatic Adjustment Start" to "6.8.13 Focus Bias Adjustment".

Press the STOP key when stops execution of the automatic adjustment on the way and stop processing. Then return to the state of "6.8.10 Preparations" and stop the operation.

PDR-W839

<Pickup replacement repair, the final check inspection method after adjustment>

Disk required:

CD-R disc

- * [STD-R07(PVC:RDD-74B,RDD-74BJ)]
- [STD-R08(PVC:RDD-74,RDD-74U)]
- or equivalent

CD-RW disc

- * [STD-R11(PVC:RDW-74,RDW-74J)]
- or equivalent

[Inspection items]

1. Recording-playback jitter

Method: Measure RF signal (CN102-pin2) by Jitter Meter (Trailing edge).
Specification: 35nS or below.

2. Recording-playback block error

Method: While pushing "CD-R CONTROL" side "DISPLAY" key, press "REC MODE" key.

Display: appears in about 4 sec like C1 * * * * *

Specification: 65 pieces or less

(Press "STOP" key to reset display)

3. Recording-playback ATIP error

Method: While pushing "CD-R CONTROL" side "DISPLAY" key, press "AUTO SPACE" key.

Display: appears in about 10 sec like ATIP * * * * *

The three digits on the left = Total number of errors

The three digits on the right = Maximum continuous error number (Specification item)

Specification: Max continuous error (Right side datum) must be 7 pieces or less.

(Press "STOP" key to reset display)

[Warning]

Scratch, dust, fingerprint, etc. on recording disc may cause deterioration of performance. Take care of the discs.

When CD-RW disc is used for measurement, do not use the same position at more than 100 times.

7. GENERAL INFORMATION

7.1 DIAGNOSIS

7.1.1 ERROR CODE (CD-R)

Error Code Display for Service

The PDR-W839 can display the error codes for service.

When the DISPLAY key of the CD-R side and ERASE key is held down simultaneously, an FL display as shown below is

• Display

999999 **

Error code Number(2 digits)

Right 2 FL digits : Error code for service

The error code for service is displayed as a number (ERROR NUMBER), which follows a message "CHECK DISC" or "CHECK." For details, see the table below.

Error code table for service

Code	Symptom	Contents of Error	Possible Cause	Checkpoints
L*	The unit stops during the tray open/close operation. (CHECK display)	Improper loading	<ul style="list-style-type: none"> Defective tray position sensor Defective loading motor Improper soldering Pattern short Improper power supply 	IC451 (BA5810FP)
E*	The unit stops when PLAY or REC/PAUSE starts. (CHECK display)	Defective slider • The pickup cannot be returned to the specified position.	<ul style="list-style-type: none"> Disconnected flexible cable Defective drive circuit Abnormal power supply Abnormal TOC position switch Improper soldering 	S601 (PSG1014) IC451 (BA5810FP) IC401 (CXD2585Q)
P*	The unit does not read the inserted disc, and stops. (CHECK DISC display)	Defect in spindle • Disc upside-down. • Dirty or cracked disc • Abnormal disc rotation • No signal obtained from the disc	<ul style="list-style-type: none"> Defective spindle motor Defective spindle drive circuit Abnormal FG signals Defective WBL circuit Defective decoder circuit Unable to read ATIP or subcode High error rate 	PC651 (NJL5809K-F1) IC451 (BA5810FP) IC401 (CXD2585Q)
C*	The unit stops before it enters REC/PAUSE mode.	Defects related to the recording laser power • Dirty or cracked disc • The optimum recording power cannot be obtained. • Trouble in RF detection.	<ul style="list-style-type: none"> Defective laser diode Trouble in RF detection Defective RFT RFB circuit Recording power is not sufficient. Improper soldering, pattern short Trouble with power supply Unable to read ATIP or subcode 	IC201 (PA9007A) IC101 (AK8567) IC308 (TC7S14F)
F*	The unit stops during playback or recording.	Defective pickup • Unable to focus because of dirt or crack on the inserted disc. • Unable to output the proper laser power	<ul style="list-style-type: none"> Defective laser diode Defective focus drive circuits Defective pickup Improper soldering Pattern short Trouble of power supply 	IC451 (BA5810FP) IC401 (CXD2585Q)
A*	The unit stops in a recording-related operation, displaying "CHECK DISC."	• Unable to focus Stop during recording • The unit stops, being obstructed by a dirt or a crack on the disc.	If any hardware trouble occurs before displaying A* or d*, the unit stops displaying a code other than these codes. Therefore, these service codes are generated only for troubles with the disc.	
d*	The unit stops in a recording related operation, displaying "CHECK DISC." The unit does not read the inserted disc, and stops.			

The indication for * shows the mechanism mode listed below.

No.	Mechanism Mode	No.	Mechanism Mode	No.	Mechanism Mode
0	PLAY	5	SETUP	A	REC
1	OPEN	6	TOC READ	B	TOC REC
2	STOP	7	—	C	OPC
3	—	8	SEARCH	D	TOC CHECK
4	—	9	REC/PAUSE	E	PMA, ACTUAL PAUSE REC

Error code table for service

Code	Generation Condition
L*	In the tray opening procedure, if opening is not completed within 4.5 sec., the procedure moves to closing. Afterwards if this closing is not completed within 4.5 sec., the procedure recalls opening again. If the recalled opening procedure is not also completed within 4.5 sec., the operation halts. Doing the tray closing procedure, if closing is not completed within 4.5 sec., the procedure moves to opening action. Afterwards if the opening procedure is not completed within 4.5 sec., the operation halts.
E*	(1) When the slider moves in REV direction, if TOC position SW does not become "H" within 3.4 sec., the operation halts. (2) After (1) is completed normally and then the slider moves in the FWD direction, if TOC position SW does not become "L" within 300 msec., the operation halts. (3) After (2) is completed normally and then the slider moves in the REV direction, if TOC position SW does not become "H" within 300 msec., the operation halts.
P*	When Q data is not read in 1 sec. and ATIP data is not read in 1 sec., the system tries to read them 3 times. If both Q data and ATIP data are still not read, the operation halts, etc.
C*	When reading PCA area, if searching for the playback starting position has failed, this is tried twice. If the search is not completed, the operation halts. When writing PCA area, the rotation does not reach to the required speed at writing position, and it is not possible for the writing to start. If searching for the writing starting position fails, it is retried 19 times, and if both are still incomplete, then the operation halts.
F*	Once disk discrimination is completed, and focus-in action is failed, then the operation halts.
A*	If the pick-up jump occurs during recording, and it is not recovered, then the operation halts. If ATIP data is not read for 4 sec. during recording, then the operation halts.
d*	If PMA writing is not completed within 60 sec., then the operation halts. If reading of TOC and PMA have failed, or there is missing information observed in the read data, an error occurs. When recording is started, if RF signal exists instead of NO RF at the end edge boundary of the disc, an error occurs.

7.1.2 SOLUTION OF 3CD TRAY MISMATCHING

<SOLUTION WHEN 3CD POSITION MISMATCHING OCCURS>

Just after power on, if clamped tray is different from the disc number displayed on FL indicator, proceed with the following operations.

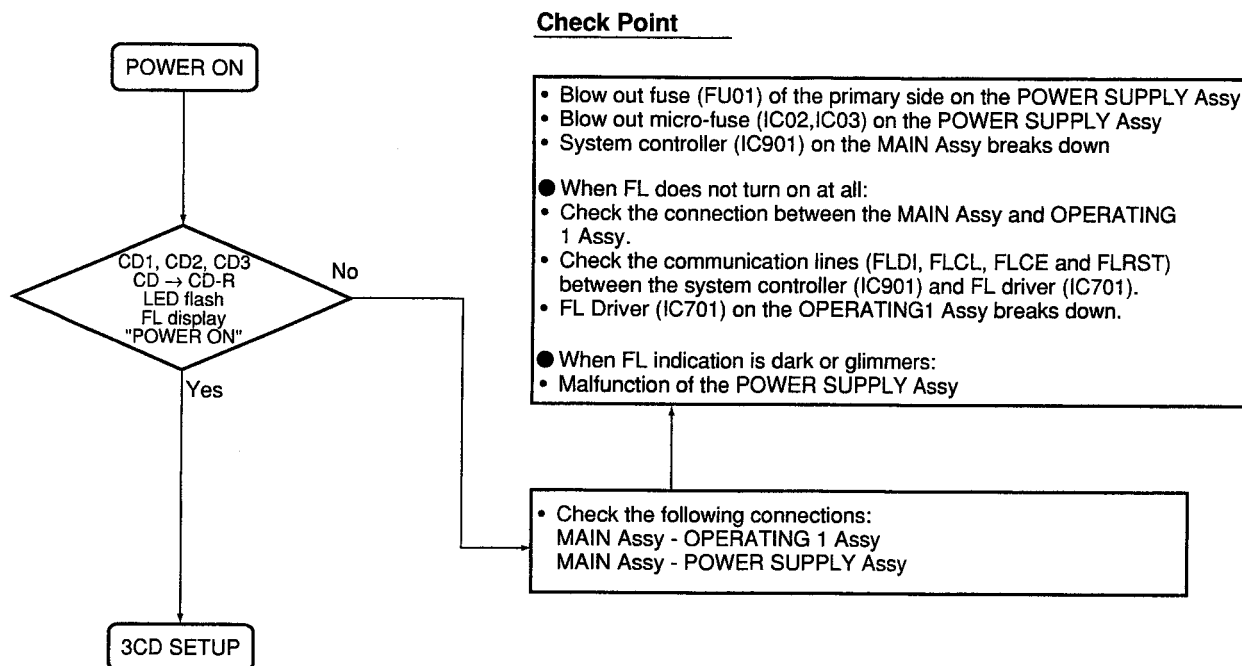

1. Press "OPEN/CLOSE1" key to open the tray. Even the tray that has come out at this time is not tray1, keep doing the following procedure.
2. When tray-opening operation is completed, press "OPEN/CLOSE2" key to open the next tray.
3. Like the previous operation when tray-opening operation is completed, press "OPEN/CLOSE3" key to open the next tray.
4. When tray-opening operation is completed, then press "OPEN/CLOSE1" key again. If the tray 1 is opened, The procedure is completed.

If this procedure does not recover mismatched tray, turn power off/on then repeat the whole procedure above again.

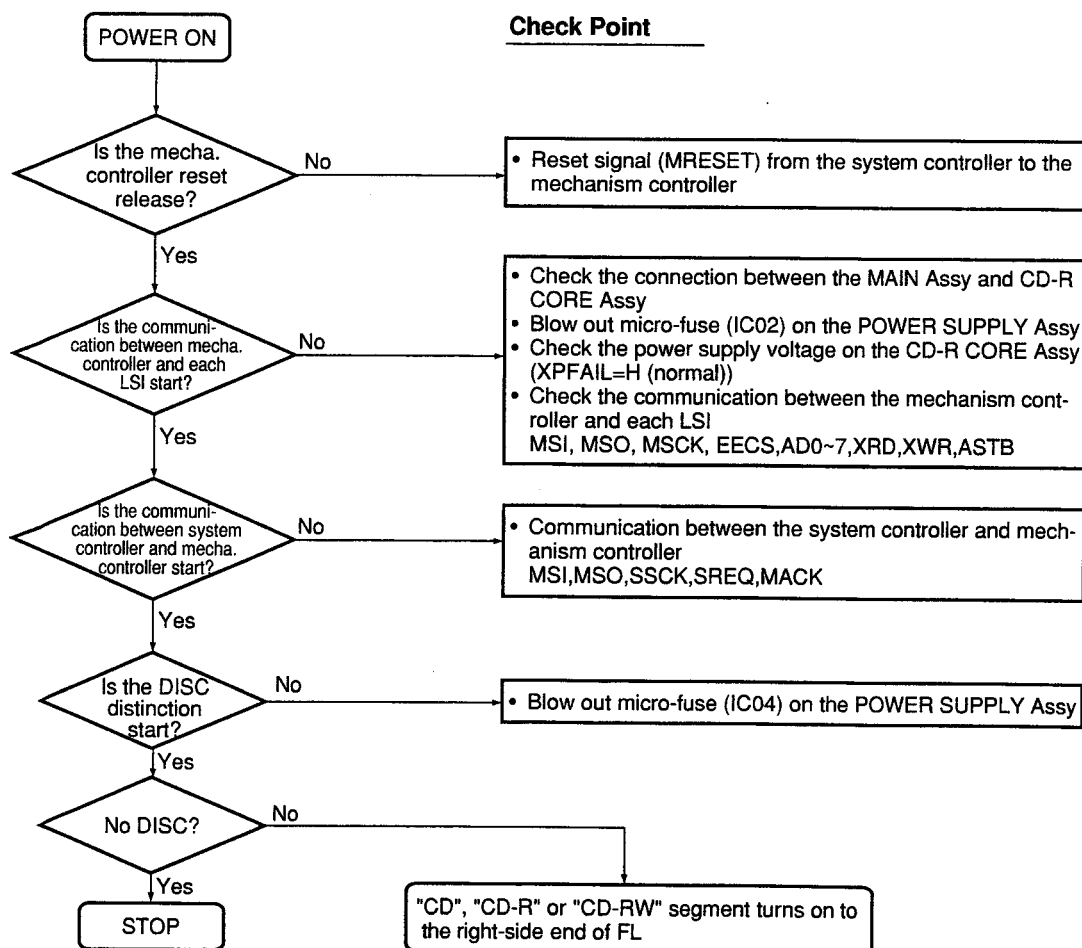

Warning) In case you start the self-reset mode during the operation, wait until the operation is completed and then proceed the operations from the next step.

7.1.3 POWER ON SEQUENCE

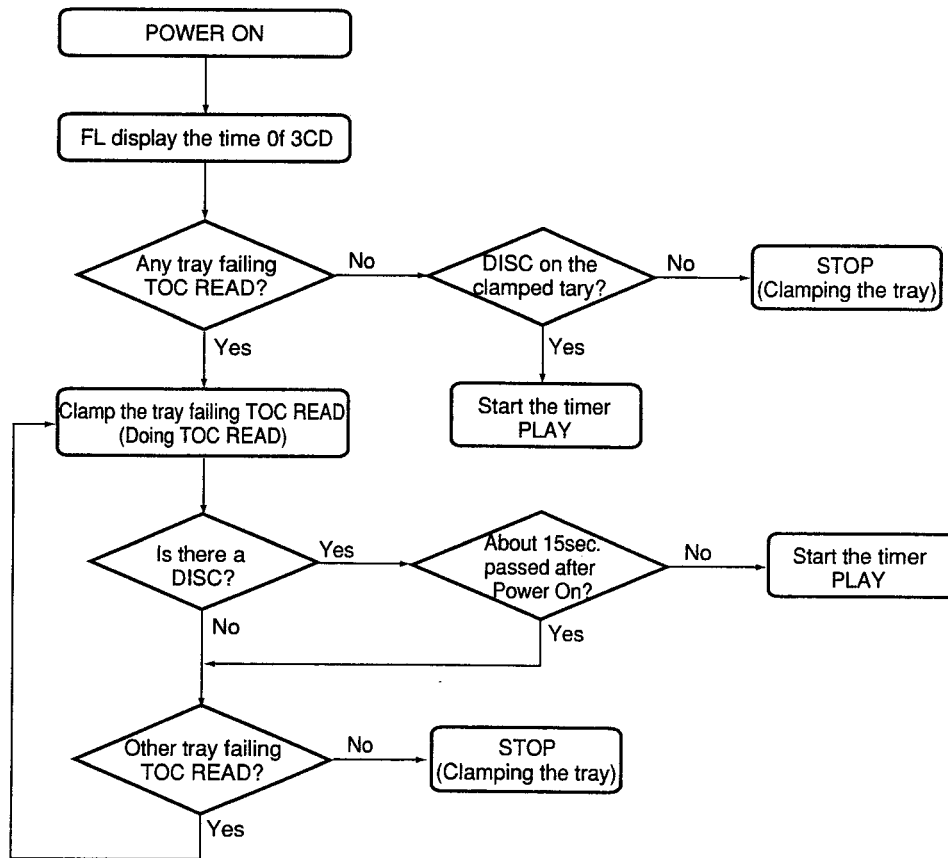

POWER ON SEQUENCE (Display System)

SETUP SEQUENCE (CD-R)

SETUP SEQUENCE (3CD)

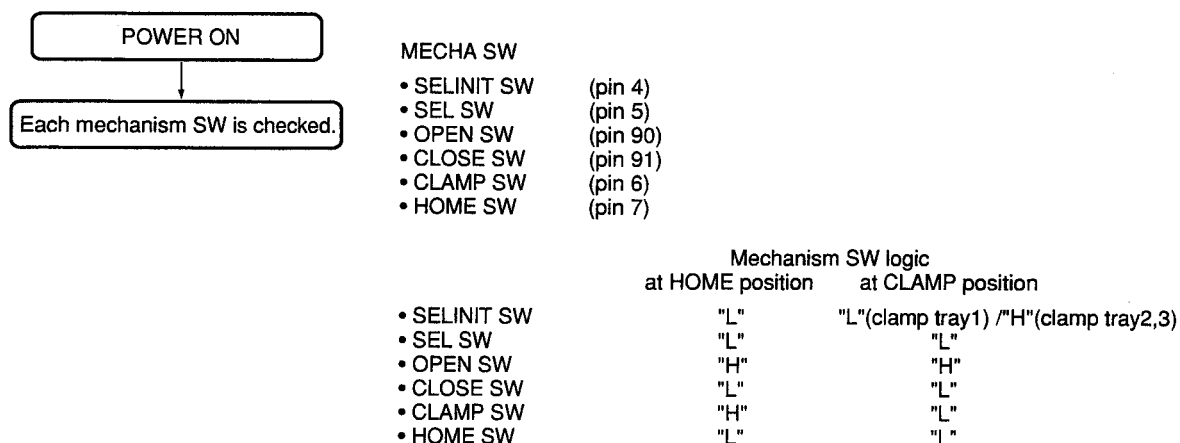

Confirm the check point below when the sequence doesn't work as above,
or the 3CD doesn't work when pushing the key (OPEN/CLOSE key, PLAY key, etc).

Check Point

- Check the connection between 3CD CORE Assy and the MAIN Assy
- Blow out micro-fuse (IC01) on the POWER SUPPLY Assy.
- Check the logic of mechanism SW. (Refer to the "Initialization sequence at POWER ON of 3CD MICRO CHANGER MECHANISM".
- Check the select drive signal
SELO+(CN1302 pin 8), SELO-(CN1302 pin 9)
- Check the loading drive signal
LO+(CN1302 pin 10), LO-(CN1302 pin 11)

● Initialization Sequence at POWER ON of 3CD MICRO CHANGER MECHANISM

Setting the initial condition for shipping

Setting the initial operating condition

The factory default settings shall be as below.

For reason that this product memorizes the condition of below items by back-up battery.

Note) All items are reset to the factory default setting when pushing the MENU key about 10 sec.

Adjusting the shipping position of mechanism.

Before shipping, it is necessary to adjust the shipping position of the mechanism. See following.

< CD-R tray mechanism >

1. Open CD-R tray and remove a disc.
2. Push OPEN/CLOSE button and wait until the FL display "NO DISC".

DISC ①

< 3CD changer mechanism >

1. Open the tray; CD1-CD3, and remove all discs. And close the tray.
2. Wait until DISC1 to 3 indicators on the FL display, see right, are put out all and the mechanism is stopped.
3. ON pushing "STOP(CD-R side)" key, and push "PLAY MODE" key.
→ "OK!" is displayed on the FL display, then the mechanism is set to the shipping position.
4. Turn off the power.

DISC ②

PDR-W839

7.1.4 ERROR MESSAGE "CHECK TEMP"

If recording is operated on the PDR-W839 in high or low temperatures, a message "CHECK TEMP" is displayed for several seconds, the operation halts, and then afterwards the display changes to "MONITOR".

This message is displayed to indicate what happens to recording and playback operation if the product is placed on a hot object like an amplifier or in a closed space like a rack in which an object omitting heat such as an amplifier would make it even hotter. If the product is moved to different temperature, the problem disappears. When the temperature sensor inside the product hits +70°C or higher, or -15°C or lower, the message is displayed. Once displayed, all actions stop. In addition, the product will be warmer than the temperature outside the casing and the outside product threshold temperature would be a little lower. These temperatures are not specifications that guarantee operation.

7.1.5 CD-R DISC MANUFACTURER CODE

PDR-W839 has a function to check the "Manufacturer Code" of a CD-R disk. By checking the information in the "Lead-in Start Time", which is displayed when the following procedure is performed, against the following table, the manufacturer becomes clear. Verification whether this is a checked disk or not becomes possible. Be reminded that in the case of CD-R disks, label indication is sometimes different from manufacturer's name. Through this operation you can provide more exact information regarding to unchecked disks to your customers. It is worth using.

*Operation procedure

- (1) Insert the disc to verify the manufacturer.
- ↓
- (2) While pushing "CD-R CONTROL" side "DISPLAY" key, press "INPUT" key.
- ↓
- (3) Check that the DISPLAY reads "PEC*****" (RID).
- ↓
- (4) Press the "INPUT" key 14 times.
- ↓
- (5) Check that the DISPLAY reads "LIA 97:***:***"
- ↓
- (6) Refer this value to the following table.
- ↓
- (7) Press "STOP" key to end

MANUFACTURER CODE LIST

■ Bonnet

■ CD-R CORE ASSY

● Servo Mechanism Block

■ 3CD MICROCHANGER MECHANISM

● Attention when 3CD MICROCHANGER MECHA is assembled

① Tray installation

② Gear match of sub-tray

7.1.7 DIAGNOSIS OF 3CD MICROCHANGER MECHANISM and MAINASSY

When diagnosing the 3CD Microchanger Mechanism and MAIN Assy, use the following Flexible Cables and Connector Assy for service.

(When you diagnose only 3CD Microchanger Mechanism, the product operates with CD-R CORE ASSY removed.)

- ① Remove the CD-R CORE Assy.
- ② Replace three cables (① ~ ③) for service and diagnose it.

• Flexible Cables and Connector Assy for service CD-R CORE Assy ↔ Other Assys

- ① CN901 ↔ CN202 (POWER SUPPLY Unit)
Connector Assy (6P) : PG06KK-F50
- ② CN502 ↔ CN601 (MAIN Assy)
25P FFC : PDD1227
- ③ CN302 ↔ CN904 (MAIN Assy)
9P FFC : PDD1226

7.1.8 DIAGNOSIS OF CD-R CORE ASSY

When diagnosing the CD-R CORE Assy, use the following Flexible Cables and Connector Assys for service.

- ① Remove the CD-R CORE Assy. (Refer to the Disassembly of the CD-R CORE Assy and steps ① to ⑥ of the Servo Mechanism Block.
- ② Replace seven cables (① ~ ⑥) for service and diagnose it.

• Flexible Cables and Connector Assys for service CD-R CORE Assy ↔ Other Assys

- ① CN901 ↔ CN202 (POWER SUPPLY Unit)
Connector Assy (6P) : PG06KK-F50
- ② CN452 ↔ CN601 (MECHA PCB Assy)
8P FFC/30v : PDD1225
- ③ CN502 ↔ CN601 (MAIN Assy)
25P FFC : PDD1227
- ④ CN302 ↔ CN904 (MAIN Assy)
9P FFC : PDD1226
- ⑤ CN101 ↔ CN1 (CD-R Pickup)
32P FFC : PDD1224
- ⑥ CN451 ↔ CN101 (LOAB Assy)
Connector Assy (3P) : PG03KK-E50

4	P35/TO1	MACK	O	Serial hand shake to the system control IC output
5	P36/TO2	EECS	O	Enable output for EEPROM access
6	P37/TO3	XECE	O	Enable output for reading the jig for test
7	XRESET	XRESET	I	Reset input (L: Reset)
8	VDD1	Vdd1	–	+5V
9	X2	X2	–	Crystal input for system clock (32MHz)
10	X1	X1	–	Crystal output for system clock (32MHz)
11	VSS1	Vss1	–	GND
12	P00	APCDAC0	O	NC
13	P01	APCDAC1	O	NC
14	P02	APCDAC2	O	NC
15	P03	PW0	O	Recording laser power monitor Output (0)
16	P04	PW1	O	Recording laser power monitor Output (1)
17	P05	PW2	O	Recording laser power monitor Output (2)
18	P06	PW3	O	Recording laser power monitor Output (3)
19	P07	PW4	O(I)	Recording laser power monitor Output (4)
20	P67/XREFRQ/HLDAK	XRW	O	CD-RWreversing output (CD/CD-R: H, CD-RW: L)
21	P66/XWAIT/HLDRQ	CLOKDEC	O	CLOCK output for CXD2585Q command
22	P65/XWR	XWR	O	Strobe signal output for read operation of the external memory
23	P64/XRD	XRD	O	Strobe signal output for write operation of the external memory
24	P63/A19	XLATDEC	O	Latch output of CXD2585Q command
25	P62/A18	CLOKRF	O	When communicating output AK8567 exclusive use clock (CXD2585 ("H" fixation) (AKCLOCK))
26	P61/A17	DATA	O	CXD2585Q/AK8567 common DATA output (SSO)
27	P60/A16	XLATRF	O	AK8567 exclusive use LATCH output for AK8567 command
28	P57/A15	XTERST	O	Tracking error envelope detection reset output
29	P56/A14	ECLV	O	Spindle servo EFMCLV mode switch output
30	P55/A13	CLV	O	Spindle servo CAV and WOBBLER CLV mode switch output
31	P54/A12	GAINUP	O	GAIN set switch output for CD-RW (CD-RW="H")
32	P53/A11	AGCON	O	WOBBLER extraction AGC circuit ON/OFF switch output
33	P52/A10	CDROPC	O	Signal output for AC circuit control for CD-R running OPC
34	P51/A9	LDON	O	LASER DIODE ON/OFF output (ON="H")
35	P50/A8	LRST	O	Reset for the servo and digital system ICs (L : Reset)
36	P47/AD7	AD7	O	Data address line
37	P46/AD6	AD6		
38	P45/AD5	AD5		
39	P44/AD4	AD4		
40	P43/AD3	AD3		

●Pin Function(2/2)

No.	Mark	Pin Name	I/O	Pin Function
41	P42/AD2	AD2	O	Data address line
42	P41/AD1	AD1		
43	P40/AD0	AD0		
44	ASTB/CLKOUT	ASTB	O	External latch signal of lower address signal for external memory access
45	Vss0	GNDD	—	GNDD
46	TEST	GNDD	—	GNDD
47	P10/PWM0	VWDSW	O	Laser driver time constant switch output for WRIT (H:ON,L:OFF)
48	P11/PWM1	TMODE	O	TEST MODE output (TEST MODE:H)
49	P12/ASCK2/XSCK2	QCLK	O	CLOCK output for CXD2585Q sub-Q reading
50	P13/RXD2/SI2	QDATA	I	DATA output for CXD2585Q sub-Q reading
51	P14/TXD2/SO2	N.C	O	-
52	P15	XRFDDET	I	EFM playback RF detection
53	P16	FOK	I	FOCUS OK input (L : Focus OK)
54	P17	XCD	O	CD/other switch output (CD="L")
55	Vdd0	Vdd0	—	+5V
56	P70/ANI0	MPXTEST	I(A)	AK8567 MPX input (various data for servo system adjustment)
57	P71/ANI1	WRFPFH	I(A)	A OUT input (running OPC)
58	P72/ANI2	WRFSH	I(A)	B OUT input (running OPC)
59	P73/ANI3	TERM	I(A)	Temperature sensor input
60	P74/ANI4	RFB	I(A)	Playback RF lower side envelope input
61	P75/ANI5	RFT	I(A)	Playback RF upper part envelope input
62	P76/ANI6	M11	I(A)	CDRMR1 (RF upper part (envelope without coupling) input (for modulation degree calculation)
63	P77/ANI7	TRAY	I(A)	LOADING POSITION input (OPEN="L")
64	Avdd	AVdd	—	+5V
65	Avref1	AVref1	—	+4.5V
66	Avss	AVss	—	GNDA
67	ANO0	VWDC2	O(A)	CD-R OverDrive/CD-RW record power output (0)
68	ANO1	DA1	O(A)	CD-R OverDrive/CD-RW record power output (1)
69	Avref2	AVref2	—	+4.5V
70	Avref3	AVref3	—	GNDA
71	P20/NMI	XPFAIL	I	Power failure detection
72	P21/INTP0	XINT1	I	The EFM ENCODER SYNC1 detection (detection interrupt and the synchronous demand interrupt of RF,etc).
73	P22/INTP1	XINT2	I	The EFM ENCODER SYNC1 detection
74	P23/INTP2/C1	ATIPSYNC	I	ATIP FLAME SYNC detection
75	P24/INTP3	SCOR	I	EFM DECODER FLAME SYNC detection
76	P25/INTP4/ASCK	FG	I	SPINDLE FG detection
77	P26/INTP5	SENS	I	SENS input
78	P27/SI0	MSI	I	Synchronous serial transfer data input
79	P30/RXD/SI1	SCLK	O	CLOCK output for CXD2585Q serial READ OUT reading
80	P31/TXD/SO1	N.C	O	-

Note: (A) in item I/O shows "ANALOG".

●Pin Function(1/3)

No.	Pin Name	I/O	Pin Function
1	AVDD3	I	Analog, positive power source pin
2	BCENT	O	Central signal output pin
3	PHBETA	O	β signal top level output pin
4	BHBETA	O	β signal bottom level output pin
5	PHBTC	O	External capacitor connector pin for PHBETA droop rate setting
6	BHBTC	O	External capacitor connector pin for PHBETA droop rate setting
7	MPP	O	Main push-pull signal output pin
8	TEIN	I	Input pin for tracking signal processing circuit
9	TE	O	Tracking error signal output pin
10	FE	O	Focus error signal output pin
11	SBAD	O	SBAD signal output pin
12	TZCLVL	I	Compare level input pin for tracking zero cross
13	VREF	I/O	Decoupling pin for internal reference voltage/reference voltage input pin
14	AGND1	O	Decoupling terminal for internal reference voltage
15	BIAS	O	Bias resistance connector pin (Bias=4.7k Ω)
16	VSS	I	Analog ground pin
17	FVREF	I	Reference voltage input pin for APC
18	FPD0	I	Laser monitor output pin
19	RREF	I/O	Power setting voltage input pin for Read APC/built-in DAC setting voltage
20	VRDC	O	Laser driver control output pin for Read
21	VRDCN	I	Laser driver control amp.(-) pin for Read
22	VRDCN2	I	Laser driver time constant setting pin for Read
23	WREF	I/O	Power setting voltage input pin for write APC/built-in DAC setting voltage output pin
24	WDA0	O	Power setting for write APC built-in DAC voltage output pin
25	AVDD2	I	Analog, positive power source pin
26	AVSS2	I	Analog ground pin
27	VWDC	O	Laser driver control output pin for Write
28	VWDCN2	I	Laser driver time constant setting pin for Write
29	VWDCN	I	Laser driver control amp.(-) pin for Write
30	ATFM	O	Wobble signal output pin
31	AGC1C	O	External capacitor connector pin for AGC1 response speed setting
32	AGC2C	O	External capacitor connector pin for AGC2 response speed setting
33	AGV3C	O	External capacitor connector pin for AGC3 response speed setting
34	AGND2	O	Decoupling pin for internal reference voltage
35	VSS	I	Analog ground pin
36	SGAINDN	I	Gain switch control signal input pin
37	GAINUP	I	CD-RW switch control signal input pin
38	AGCON	I	Wobble AGC enable signal input pin ("H" AGC ON, "L" AGC reset)
39	ATFG	O	ATIP FG (digital wobble signal) output pin
40	XTOR	O	Tracking amplitude detection signal output pin
41	XTAND	O	Off tracking detection signal output pin
42	TZC	O	Tracking zero cross detection signal output pin

●Pin Function(2/3)

No.	Pin Name	I/O	Pin Function
43	RECD2	I	Recorded area detection signal output pin2 ("H" recorded, "L" unrecorded)
44	RECD1	O	Recorded area detection signal output pin1 ("H" recorded, "L" unrecorded)
45	RC	O	RC signal output pin
46	DFCT	I	DFCT signal output pin
47	MIRR	I	MIRR signal output pin
48	MCLK1	I	Main clock input pin1 (input sine wave)
49	MCLK2	I	Main clock input pin2 (input sine wave)
50	DVSS	I	Digital ground pin
51	DVDD	I	Digital power source pin
52	FOK	I	FOk signal output pin
53	RZC	I	RF zero cross detection signal output pin
54	MPDSH	I	Sample pulse input pin for main beam signal ("H" sample, "L" hold)
55	SPDSH	I	Sample pulse input pin for side beam signal ("H" sample, "L" hold)
56	REPDSH	I	Sample pulse input pin for Read APC ("H" sample, "L" hold)
57	WFPDSH	I	Sample pulse input pin for Write APC ("H" sample, "L" hold)
58	WLDON	I	Write laser diode control signal input pin ("L" Write APC setting to zero, "H" laser diode ON)
59	RLDON	I	Read laser diode control signal input pin ("L" Read APC setting to zero, "H" laser diode ON)
60	SPBLVL	I	BLEVEL signal sample pulse pulse input pin ("H" sample, "L" hold)
61	SPRFTR	I	WRFTR signal sample pulse pulse input pin ("H" sample, "L" hold)
62	VWDSW	I	Laser driver time constant switch control signal input pin for Write ("H" ON, "L" OFF)
63	VRDSW	I	Laser driver time constant switch control signal input pin for Read ("H" ON, "L" OFF)
64	RSBETA	I	β measurement circuit reset pin ("H" PHBETA,BHBETA output to Reset)
65	SCLK	I	Clock input pin for register setting
66	SDATA	I	Data input pin for register setting
67	XLAT	I	Latch signal input pin for register setting
68	XRST	I	Register reset pin ("L" initialize registers)
69	VSS	I	Analog ground pin
70	OSTCC	O	External CAP connector pin for EQ output offset cancelor fc setting
71	AGCC	O	External CAP connector pin for RFAGC response speed setting
72	PHD2C	O	External CAP connector pin for P/H2 Droop rate setting
73	RCCMPI	I	Comparator input pin for RC detection
74	PBH0	O	RRF signal bottom/top level output pin
75	AVDD1	I	Analog, positive power source pin
76	AVSS1	I	Analog ground pin
77	RRFTOP	O	RRF signal peak level output pin
78	RRFBTM	O	RRF signal bottom level output pin
79	NC	-	-
80	EQRF	O	Equalizer filter output pin
81	NC	-	-
82	AUX1	I	Auxiliary input pin for signal monitoring 1
83	AUX2	I	Auxiliary input pin for signal monitoring 2
84	AUX3	I	Auxiliary input pin for signal monitoring 3
85	MPXOUT	O	Multiplexer output pin for signal monitoring

PDR-W839

●Pin Function(3/3)

No.	Pin Name	I/O	Pin Function
86	RRFVC	I	Level shift voltage input pin for signal monitoring
87	RECDIN	I	RF input pin for Recorded area detection
88	RRF	O	Read RF signal output pin
89	WRF	O	Write RF signal output pin
90	VSS	I	Analog ground pin
91	AIN	I	Main beam signal (A) input pin
92	BIN	I	Main beam signal (B) input pin
93	CIN	I	Main beam signal (C) input pin
94	DIN	I	Main beam signal (D) input pin
95	EIN	I	Main beam signal (E) input pin
96	FIN	I	Main beam signal (F) input pin
97	GIN	I	Main beam signal (G) input pin
98	HIN	I	Main beam signal (H) input pin
99	HAVC	I	Main/side beam signal reference voltage input pin
100	AVSS3	I	Analog ground pin

●Pin Function

No.	Pin Name	Pin Function	No.	Pin Name	Pin Function
1	FWD	Input for loading forward	15	V04(+)	Not inverted output of CH4
2	REV	Input for loading reverse	16	V04(-)	Inverted output of CH4
3	LDCONT	Output control terminal for loading	17	V03(+)	Not inverted output of CH3
4	PS	Control terminal for power saving mode	18	V03(-)	Inverted output of CH3
5	IN1	Input of CH2	19	GND	Substrate ground
6	IN2	Input of CH1	20	POWVCC34	Power unit power supply input terminal (CH3,CH4)
7	PREVCC	Pre and loading unit power supply input terminal	21	MUTE	Input for mute control
8	POWVCC12	Power unit power supply input terminal	22	OPOUT3	Output of CH3 OP-AMP
9	VOL(-)	Inverted output of loading	23	OPIN3(-)	Inverting input of CH3 OP-AMP
10	VOL(+)	Not inverted output of loading	24	OPIN3(+)	Not inverting input of CH3 OP-AMP
11	V02(-)	Inverted output of CH2	25	OPOUT4	Output of CH4 OP-AMP
12	V02(+)	Not inverted output of CH2	26	OPIN4(-)	Inverting input of CH4 OP-AMP
13	V01(-)	Inverted output of CH1	27	OPIN4(+)	Not inverting input of CH4 OP-AMP
14	V01(+)	Not inverted output of CH2	28	BIAS	Input of Bias-amplifier

8. PANEL FACILITIES AND SPECIFICATIONS

8.1 PANEL FACILITIES

■ Front Panel

- 1 **OPEN/CLOSE ▲ 1/2/3** – Press to open/close disc tray 1, 2 or 3 from the changer.
- 2 **Changer disc tray**
- 3 **CD SELECT 1/2/3** – Press to select and play disc 1, 2 or 3 from the changer.
- 4 **CD → CD-R START(REC THIS)**– Press to start copying from disc(s)/tracks in the CD changer.
- 5 **CD-R disc tray**
- 6 **CD-R functions**
REC MODE – Use to select the copy mode: disc, track or program.
ERASE – Use to select the erase mode: last track, multiple tracks, all tracks or TOC.
FINALIZE – Press to start finalizing a disc.
SYNCHRO – Use to select the synchro recording mode when recording from an external component.
AUTO SPACE – Press to switch on/off automatic track spacing when copying a programmed playlist.
NAME – Use to cycle through CD text naming options.
MENU/DELETE – Press to cycle through the preference menu options. Press to delete characters while editing CD text.
- 7 **OPEN/CLOSE ▲** – Press to open/close the CD-R disc tray.
- 8 **REC / REC MUTE ●** – Press to put the recorder into record-pause mode ready for recording. Once recording, use to record blank sections onto a disc.
- 9 **POWER □ OFF / ▢ ON** – Press to switch the unit on or off.

- 10 **3-CD Controls**
◀◀◀ – Press for reverse track skip; press and hold for fast reverse playback.
▶▶▶ – Press for forward track skip; press and hold for fast forward playback.
DISPLAY – Use to switch the CD display mode.
▶/|| – Press to play a disc or pause a disc that's already playing (press again to restart playback).
■ – Press to stop playback.
- 11 **PLAY MODE** – Set the play mode to play one disc, all discs in the changer, or all discs in both the changer and CD-R.
- 12 **PHONES** – Plug in a pair of headphones.
- 13 **KEYBOARD INPUT** – Connect a keyboard to input CD text.
- 14 **INPUT** – Use to select the external input to use: optical, coaxial or analog line in.
- 15 **CD-R CONTROL**
◀◀◀ – Press for reverse track skip; press and hold for fast reverse playback.
▶▶▶ – Press for forward track skip; press and hold for fast forward playback.
DISPLAY – Use to switch the CD-R display mode.
▶/|| – Press to play a disc or pause a disc that's already playing (press again to restart playback). Also use when recording to start or pause recording.
■ – Press to stop playback or recording.
- 15 **REC LEVEL (Jog dial)**– Turn to adjust the recording level. Push to switch between fixed and variable level recording in digital recording mode. Also turn to select options in the menu ;cycle through characters in CDtext ;skip tracks while stopped or during playback. Push the jog dial to select characters in CD text ;confirm menu settings ;play a disc (when stopped).

■ Remote Control Unit

- 1 **DISPLAY/CHARA** – Press to switch between display modes, and between upper-and lower-case characters while using CD text.
- 2 **SCROLL** – Press to scroll through long names in CD text.
- 3 **MENU/DELETE** – Press to access the preference menu options. Press to delete characters while editing CD text.
- 4 **FADER** – Press to fade in or fade out during playback or recording.
- 5 **PLAY MODE** – Set the play mode to play one disc, all discs in the 3-CD changer, or all discs in both the changer and CD-R.
- 6 **10/MARK** – Use in selecting tracks over ten, as well as for choosing symbols when using CD text.
- 7 **Playback control buttons**
 ◀◀ ▶▶ – Skip back/forward tracks.
 ▶ – Start or resume playback, or start recording from record-pause mode.
 ◀◀ ▶▶ – Press and hold for fast-reverse and fast-forward playback, and to move cursor position when using CD text.
ENTER – Confirm menu settings; confirm characters in CD text.
 ■ – Stop playback or recording.
- 8 **REC THIS** – Press to record the track that's currently playing the changer.
- 9 **Disc select buttons**
DISC1/2/3 – Press to select and play disc 1, 2 or 3 from the changer.
CD-R – Switch to the CD recorder and play the currently loaded CD/CD-R/CD-RW.
- 10 **Playback/skip buttons**
PROGRAM – Program the playback track order.
CHECK – Check the tracks of a programmed play list, and monitor the CD changer.
CLEAR – Clear the last programmed track in program play mode.
RANDOM – Start random track/disc playback.
REPEAT – Set the repeat mode.
SKIPPLAY – Press to switch skip play on or off.
SKIP ID SET/CLEAR – Set or clear a track skip ID for the current track.
- 11 **NAME CLIP** – Press to copy the current CD text to the recorder's memory.
- 12 **Number/Letter buttons** – Use to jump directly to track numbers for playback, selecting track number for editing/programming, and selecting letters when using CD text.
- 13 **NAME** – Use to cycle through the CD text naming options.
- 14 **>10** – Use to select track numbers over 10.
- 15 **||** – Pause playback or recording.

■ Display

- 1 **DISC 1/2/3** – Indicates discs loaded.
- 2 **DISC Lights** when disc information is displayed.
TRACK Lights when track information is displayed.
ARTST Lights when artist information is displayed.
- 3 **Message/time display**
- 4 **Status indicators**
PARTIAL – Lights when a partially recorded CD-R or CD-RW is loaded into the 3 CD changer. Random and repeat play functions are not available when this is lit.
A. SPACE – Lights when automatic track spacing is on in program copy mode.
SINGLE / ALL / RELAY – Indicates the play mode.
FADER – Lights during fade in or fade out.
SCAN – Blinks while checking playback from the CD changer(after CHECK is pressed).
RDM – Lights in random-play mode.
RPT / RPT-1 – Lights when disc repeat / track repeat is on.
PGM – Lights in program-play mode.
SKIP ON – Lights to indicate that a track's skip ID is set. SKIP blinks when clearing or setting a skip ID (ON does not appear).
VOL – Lights when the digital volume level is set to something other than 0dB.
FIX – Lights when fixed recording level is on.
DIG / ANA – Indicates whether internal recording is via a digital or analog link.
- 5 **REC THIS/Hi/COPY** – Lights when during CD recording and indicates high-speed copying.
- 6 ▷ – Lights when a disc in the changer is playing or paused.
⏏ – Lights when a disc in the changer is paused.
- 7 **Level meter**
- 8 ▷ – Lights when the recorder is playing, paused or recording.
⏏ – Lights when the recorder is paused.
- 9 **CD-R function indicators**
CD TEXT – Lights the current CD contains CD text.
CD / CD-R / CD-RW – Indicates the type of disc currently loaded in the recorder.
FINALIZE – Blinks during auto-finalization recording; lights if a finalized CD-RW disc is loaded.
MANUAL – Indicates manual numbering.
TRACK – Blinks during recording or monitoring when a new track will start using auto track numbering.
SYNC/SYNC-1 – Lights up when the recorder is in automatic synchro recording.
REC – Lights when in record or record-pause mode.
Blinks during record-muting
ANALOG/OPTICAL/COAXIAL – Lights when the corresponding analog or digital input is selected.

8.2 SPECIFICATIONS

1. General

Model Compact disc audio system
Applicable discs CDs, CD-Rs and CD-RWs
Power supply AC 120 V, 60 Hz
(U.S./Canadian models)
AC 220-240 V, 50/60 Hz (U.K./European model)
Power consumption 17 W (U.S./Canadian models)
17 W (U.K./European model)
Operating temperature +5 °C to +35 °C
(+41 °F to +95 °F)
Weight (without package) 5.7 kg
Max. dimensions 420 (W) x 128 (H) x 380 (D) mm

2. Audio unit

Frequency characteristics 2 Hz to 20 kHz

Playback S/N..... 110 dB (EIAJ) (U.S./Canadian models)
112 dB (EIAJ) (UK/European model)

Playback dynamic range 98 dB (EIAJ)

Playback total harmonic distortion 0.002 % (EIAJ)
(U.S./Canadian models)
0.0017 % (EIAJ) (UK/European model)

Playback channel separation 98 dB (EIAJ)

Recording S/N 92 dB (EIAJ)

Recording dynamic range 92 dB (EIAJ)

Recording total harmonic distortion 0.004 %

Output voltage 2.0 V

Wow-flutter Less than measurement limit
((± 0.001 % W.PEAK) (EIAJ))

Number of channels 2 channels (stereo)

Coaxial output 0.5 Vpp ± 20 % (75 Ω)

Optical output . -15 to -21 dBm (wavelength: 660 nm)

Frequency deflection: Level 2 (standard mode)

***Recording specification values are for the LINE input (analog)**

3. Input jacks

Optical digital input jack
Coaxial digital input jack
Audio LINE input jacks
Control IN jack

4. Output jacks

Optical digital output jack
Coaxial digital output jack
Audio LINE output jack

5. Accessories

Remote control unit	1
Size AA/R6P dry cell batteries	2
Stereo audio cord	2
AC power cord	1
Operating instructions	1
Warranty card	1
Keypad stickers (for European model)	1

NOTE:

The specifications and design of this product are subject to change without notice, due to improvements.
